Report

Industrial visit At Mapro Garden Company

MMS Department, RMCET Ambav

April 03rd & 04th 2026

The Introduction

Industrial visit is having its own importance in the career of students who are pursuing professional degree. It is considered as a part of college curriculum.

Objectives

The main objective of an industrial visit is to provide students an insight regarding internal working of the companies, and also to give them practical knowledge of what they have learned in class.

Following the same trend we use to organize minimum 1 industrial visit per semester.

About Mapro

This semester we have visited Mapro Garden Company situated at Wai. It is not actually a garden, but it's a manufacturing firm of chocolates, jam, syrup, etc. It is also renamed as food court. They are having their own strawberry farms. Today it has a processing capacity of about 30,000 MT per year.

They are having their own garden situated at hill station of Panchgani. It is a famous tourist destination as well. It is very joyful and knowledge gaining visit. We enjoyed a lot over there. It is a must visit company. It doesn't produce large polluted contents that's why it is very safe as well.

Day I (03rd April 2026)

On 1st day we started our journey from Devrukh at sharp 5.00 am by Traveler. Then we directly reached Wai and visited Mapro Company. It was really a wonderful experience to visit Mapro. After visiting the factory site, we went to Mapro Garden and saw how the raw materials required for the factory are harvested. At night, we stayed in Mahabaleshwar.

Day II (04th April 2026)

On 2nd day we went to at Mahabaleshwar and did site seeing over there.

This visit was completely organized and scheduled by our MMS I and II students. It was very well organized.

Looking forward to taking more wonderful industrial tours.
